

Stan Dawes Fencing Supply & Install BASTION BALLCOURTS

We have incorporated all the Individual requirements needed for a professional, robust, and affordable Ballcourt. Our aim is to make it as simple as possible for our end client, to obtain a complete ball-court fencing solution. No need for you to source individual components and work out how they fit together....we have already done that, making use of our Manufacturers vast experience with this type of product.

DURABLE

Ball-court systems endure more physical punishment than your typical fence. The selection of construction materials and design therefore are crucial to the success of the overall project. We use only robust materials to ensure that our ball-court system will withstand the "wear and tear" to which it will be subjected.

COLOUR OPTIONS

Ballcourt panels can be coated in a variety of colours. Rebound panels can be coated to match or contrast with the upper mesh, and with the surrounding environment.

NOISE REDUCTION

The anti-rattle clip is designed to reduce noise between panel and post whilst the court is in use

BALL-COURT SYSTEMS

COMPLETE BALL-COURT SYSTEMS -
*Gates, goal recesses,
spectator rail and hockey boards*

INTEGRATED REBOUND PANEL OPTION -
*A mesh panel specially designed to give an
even rebound*

GOAL RECESS AREAS

*The Bastion systems incorporate a
standard option for goal recess areas,
utilising smoothly rounded cover plates.*

BASTION 'MULTI-MESH' SYSTEM

Rebound Panel option. This system was specifically designed to provide a perfect 'rebound board'. The panel is manufactured from 6mm vertical wires and twin 8mm horizontals. The overall height of the panel is 2.0mtr, of which; up to a height of 1.2mtr the vertical wires are at 50mm centres and the horizontals at approx 68mm centres, with every third horizontal reinforced with twin wires. The remaining 800mm comprises of horizontals spaced at 200mm centres. The 'multi-mesh' panels combine with Duo mesh panels, all fitted to a 'box section' RHS or SHS post, to achieve an overall fence height of 3, 4 or 5mtr, or a combination thereof (for example a 3mtr high court that increases to 5mtr behind each goal).

'DOUBLE-SKIN' OPTION

'multi-mesh' panels can be fixed to both sides of the post, allowing a rebound surface to adjoining courts.

RIGIDITY

The rebound panel is designed to be the strongest, most rigid panel available for this purpose.

EASE OF INSTALLATION

Bastion mesh is easier to install than timber boards.

The Professional Choice

BASTION DUO SPORTSFENCE

Duo Panel option. As with the 'multi-mesh' system, the Bastion Duo Sportsfence is available in heights of 3, 4 and 5mtr. The Bastion Duo panels are manufactured from 6mm vertical wires and twin 8mm horizontals

'HOCKEY BOARD'

Both options are available with universal fixing brackets that facilitate the attachment of timber hockey boards between 150 and 350mm in height, and a thickness of up to 50mm. The hockey board is fitted in front of the mesh.

GRADIENTS

Ball-courts are generally flat, but often a very gentle gradient is required for drainage. Bastion Ballcourts can be stepped by 35mm per post for this purpose.

BASTION BALLCOURT GATES

Single gates are nominally 1200mm wide by 2.0mtr high for pedestrian access and double gates are nominally 3000mm wide by 3.0mtr high. The standard gate range is ideal whether the fence around them is 3, 4 or 5mtr high and are designed very much with safety in mind with neither the hinges or the slip-latch handle protruding into the court.
